

Progress technical Report

Accelerated Value Chain Development Program (AVCD)

**Report Period Covered:
1st January to 30th June 2020**

**Submitted by:
National Potato Council of Kenya (NPCK)**

**Submitted to:
International Potato Center (CIP)**

2nd July 2021

The NPCK in partnership with International Potato Centre (CIP) is implementing extension of “USAID-FtF funded Accelerated Value Chain Development Program (AVCD) implemented in Bungoma and Taita Taveta County. NPCK role in the project includes holding of county potato marketing forums, supporting development of county potato strategy, supporting campaign for using certified seeds and new potato varieties, enhancing E-extension materials in Viazzi Soko platform and awareness creation of the platform among the two-farmers producer organization FPOs in Bungoma and Taita Taveta.

Activities undertaken

The following is a summary of activities undertaken by NPCK for the period of January to June 2021.

Activities

County potato marketing Forum

a) Taita Taveta Potato Marketing Forum

The challenges in potato marketing include lack of structured marketing system, lack of storage facilities for harvested potato which course farmers to dispose all potatoes at harvesting leading to post-harvest glut and subsequently low prices by farmers, inefficient grading and sorting, inadequate market information by farmers among others. Direct market linkage between farmers and market outlets is widely viewed as part of the solution to solving challenges faced by farmers in marketing potatoes. Towards achieving this, NPCK in partnership with CIP and County Government of Taita Taveta County organized for Taita Taveta Potato marketing forum which was held on 18th June 2021. In attendance were; farmer representatives from the eleven FPOs, county government representation; Ministry of Agriculture and Ministry of Trade, CIP, NPCK and potato buyers (Sereni fries, Viazzi kings, one Trader from Mombasa and two traders from Taita Taveta). The forum provided a platform for business to business (B2B) discussion between farmers and the potato buyers. Through these interactive discussions, buyers gathered information of farm producer organization (FPOs) production capacity, acreage, varieties grown among others while farmers had the opportunity to learn more about variety requirements and procurement arrangements for each buyer. At the end of the discussion FPOs and the buyers exchanged contacts for business engagements later. Among the outcomes of the forum include;

- a. Establish a county demo plots for showcasing other varieties to farmers and the prioritized one are Markies, Manitou, Dutch robijn, Konjo, Voyager and Challenger
- b. Training on post-harvest management practices
- c. FPOs need to increase the volumes by increasing the acreages under potato since the demand for potatoes in the region is higher than the supply
- d. FPOs requires support in accessing tailor-made finances or credit services for potato production
- e. FPOs requires support in entering into contract farming with the buyers for them to produce the required quantities and quality
- f. FPOs will give some samples to the buyers for testing the suitability for chips and crisps

b) Development of Taita Taveta county potato strategy

Taita Taveta County possesses several factors that make potato production an important farming activity in the county such as its varied ecological zones making it possible to grow different varieties as well as its close proximity to Mombasa County, a big market for the crop. To further spur growth and harmonize the county's potato value chain activities, the county government of Taita Taveta, CIP and NPCK has partnered to develop the county's potato strategy. The county potato strategy is an essential document that helps in harmonizing all the activities, giving a clear road map on how to address the subsector challenges and constraints as well as taking advantage of new opportunities. The three institutions have held a planning meeting and formed a technical committee to spearhead the development of the strategy. The committee comprised the representatives of the three organizations. On 24th and 25th June 2021, the technical committee held a workshop at Taita Taveta County to develop the first draft that will be subjected to the wider stakeholders for validation. The strategy is expected to be ready by August 2021 for launch and implementation.

c) Campaign for using certified seeds and new potato varieties

Potato yields are affected by several factors of which the most important one is the quality of seeds used. The average yields increase from the use of good quality seeds ranges from 30 to 50 percent compared to farmers who use recycled seeds. Nevertheless, the adoption of new potato varieties good for processing and high yielding is still low despite the existence of over 60 potato varieties released in Kenya. NPCK in collaboration with CIP and other partners have established potato demonstration site in Kinangop, Nyandarua County for showcasing various technologies and innovations in the potato subsector. Among the technologies being targeted for showcasing include; apical cutting technology, new potato varieties, importance of using certified seeds and Good Agronomic Practices. Through the support of CIP, apical cutting for Unica, Nyota, Wanjiku, Chulu, and Konjo varieties were planted for showcasing and also for establishing their specific utilization after harvesting. In addition, seed tuber for Taurus, Panamera, Destiny, Shangi and Markies were also planted for showcasing. The Potato Council is planning to hold farmers' field day on 13th August 2021. Fliers for all the new potato varieties will be distributed to farmers during the field day to increase their awareness and adoption. The flier indicates the features of the variety and their potential buyers. Furthermore, farmers will be trained on the use of Viazzi soko platform to access certified seeds and other recommended inputs. The event will be live stream on NPCK Facebook and media for farmers to follow remotely hence increasing the coverage.

d) Enhancing E-extension materials onto Viazzi Soko platform

NPCK is working closely with the Viazzi soko developer in enhance the E-extension materials on to Viazzi soko platform. This involves organizing the extension materials in systematic manner for farmers to access them easily. This is expected to be completed by the end of July.

e) Awareness creation of the platform among the two-farmer producer organization FPOs in Taita Taveta.

NPCK through the support of CIP and other partners upgraded Viazzi Soko digital Platform into e-

commerce ecosystem which can be accessed through a Web-based portal, downloadable Android App and USSD short code services. The platform provides an efficient way for sourcing and procuring quality farm inputs such as certified seeds, fertilizer, agrochemicals and services such as soil testing, mechanization, spray services, marketing information and extension. It is also used to help link farmers to market outlets. NPCK is currently creating awareness of the platform through various strategies in order to increase the number of farmers using the platform. One of the strategies is training of Farmer Producer Organizations FPOs representatives so that they can train and register members of their groups onto the platform. On 17th June 2021, NPCK and CIP trained 18 FPOs representatives in Taita Taveta FPOs on the platform use. FPOs are expected to train other members of the groups on the platform use. The trained FPOs representatives were able to register and enjoyed the services offered through the platform (Annex 1 below). They expressed their excitement and appreciate the partners and the organizers for the noble initiative. During the training, it was agreed a pick-up points for inputs will be created in all the potato regions for farmers to start ordering certified seeds and other inputs. Access to certified seeds of new potato varieties was perceived to be the big challenge in the region.

f) The platform uptake progress

Currently there are 98,118 farmers registered on the platform however 830 farmers are actively using the platform to access inputs, services and advisory information. After the Upgrade of the platform, NPCK piloted the seed ordering and booking through the platform on February to April 2021. Impressively, farmers were able to order seeds worth Ksh, 4,215,749 through the platform (Annex 2). Total of 2671 bags of certified seeds were ordered by farmers from the following counties; Nakuru (1809), Meru (415), Nyandarua (222), Narok (92), Nairobi (85), Laikipia (40), Uasin Gishu (4), Elgeyo Marakwet (4). The seeds were delivered to their respective pick-up points by the logistic company working with NPCK. Currently there are 39 pick-up points in various counties (Annex 3). A total of 16 companies already registered on the platform and they are offering various products and services to farmer through the platform (Annex 4) marketing the following products and services; seeds tubers, apical cuttings, minitubers, agrochemicals, fertilizers, mechanization, soil testing and spraying services.
