MS2 report

Farmers growing cereals

Summary description of achievement

One farmer in each of the partners countries (Morocco, Algeria, Tunisia, Lebanon, Croatia, and Italy) located in the targeted mountain communities has received and planted both barley and durum wheat. The germplasm tested included a commercial and a landrace check for each, plus six potential new entries developed by ICARDA starting from ancient grains. Planting was done half following the farmer's preferred practices and half using the project planned Agro-ecological strategies. All farmers have signed a contractual agreement to describe the activities to be performed under the project.
