MART/AZR PROJECT RESEARCH REPORTS

This research report series is issued by the Management of Agricultural Research and Technology Project/Arid Zone Research Component (MART/AZR). This project is sponsored financially by the Mission to Pakistan of the United States Agency for International Development (USAID).

The project contract is implemented by the International Center for Agricultural Research in the Dry Areas (ICARDA) at the Pakistan Agricultural Research Council's Arid Zone Research Institute (AZRI).

This Institute has responsibility for undertaking dryland agricultural research in all provinces in Pakistan through its headquarters in Quetta, Baluchistan and its substations at D.I. Khan (NWFP), Umerkot (Sind) and Bahawalpur (Punjab)

This series of research reports outlines the joint research findings of the MART/AZR Project and AZRI. It will encompass a broad range of subjects within the sphere of dryland agricultural research and is aimed at researchers, extension workers and agricultural policy-makers concerned with the development of the resource-poor, arid areas of West Asia and North Africa.

Libraries, individuals and institutions may obtain single copies of this research report series free of charge and may request that their names be placed on a mailing list for periodic notifications of published papers by writing to ICARDA Office, P.O. Box 362, Quetta, Pakistan.

CAMEL SURVEY RESULTS IN HIGHLAND BALOCHISTAN

Assembled by

Sabir¹, G.F., Afzal¹, A., Shah¹, N.A.,
Nagy², J.G., Keatinge², J.D.H. & A. Rodriguez²

Abstract

Balochistan comprises less than 5 percent of the human population of Pakistan while the provincial share of camels is 36 percent (the highest amongst all provinces). Per capita camel availability is about 1 camel per 14 inhabitants. Agricultural economists and livestock specialists from AZRI conducted a descriptive, diagnostic and comparative survey on camel utilization for draft (field work) and transportation at the farm level in early 1989. An informal survey took place prior to the formal survey which comprised 136 questionnaires in three areas of highland Balochistan. Household profiles of the interviewed camel owners are included. The uses of camels, number of camels owned and land ownership are furnished by region and/or by camel age-group. Crop land farmed by traction types and farmers' preferences for these types of traction are analyzed by region. Detailed information was collected on camel demography, production and feeding constraints. Data on bullocks and tractors, the other major draft sources in highland Balochistan, is provided as well. Economic value of these means of traction is also included.

CAMEL SURVEY RESULTS IN HIGHLAND BALOCHISTAN

The camel population in Balochistan has increased very rapidly in the last 20 years, from 46,000 camels in 1965 to 349,000 camels in 1986. This increase has been the highest amongst Pakistan provinces listed in Table A. Balochistan with 4.9 million people comprises less than 5 percent of the human population of Pakistan¹ while the provincial share of camels is 36 percent. Per capita camel availability is about 1 camel per 14 inhabitants. It is apparent that camels are widely utilized for diverse farming activities and for transportation in the rural and urban areas. However, no quantification has been made about their economic role. The study by Heston et al.² aroused interest in obtaining more detailed provincial information. This camel survey was conducted by AZRI to provide base-line information about camel utilization for draft (field) and transportation at the farm level. This information will allow AZRI researchers to describe and diagnose the current situation in highland Balochistan.

¹Buzdar, N., Nagy, J.G, Sabir, G.F, Keatinge, J.D.H. & Mahmood, K. "Rainfed Agriculture in Highland Balochistan: A Farming Systems Perspective". MART/AZR Res. Rep. No. 54, ICARDA, Quetta, 1989.

²Heston, A., Hasnain, H., Hussain, S.Z. & Khan, R.N. "The Economics of Camel Transport in Pakistan". Economic Development and Cultural Change Vol. 34(1985): 121-141.

In June, 1989 agricultural economists and livestock scientists from AZRI conducted an informal survey and followed this up with a formal survey in September 1989 in three areas of highland Balochistan. A total of 136 camel owners and herders were interviewed, in area I (Kalat and Khuzdar districts), with 42 respondents; area II (Quetta, Kachi and Pishin districts), with 52 respondents; and area III (Zhob, Loralai and Killi-Saifullah) with 42 respondents.

This document offers a compilation of the data collected, as well as a preliminary analysis (grouped for those three areas and overall) of the results of the survey. As it stands presents the original grouping; however, alternative ways to group the survey results can be done for future work.

Readers interested only in general aspects of camel utilization will find enough information in Tables 1-6. These tables display the uses of camels in highland Balochistan for agricultural and non-agricultural activities, farmers' preferences for camel and other means of traction power; in addition, household profiles of the interviewed farmers are furnished, with description of the land owned, breakdown of cropped land by traction power and the number of camels owned.

Tables 7-10 provide information on economic transactions: the value of camels by age-group and sex, number of camels bought and sold, qualities looked for in male breeding camels and the income earned from camel services. Tables 11 and 12 present demographic information: births by age-group of camel cows and total deaths with their perceived causes. Tables 13-15 refer to feeding constraints and practices, supplementation schedules and specific types of supplement provided to camels.

Tables 16-21 present the management practices for camels used for agricultural and non-agricultural activities. Depending upon the camel utilization, specific training is required. Further, veterinary services available and working conditions of camels are presented. Finally, tables 22-26 provide information about the other alternative sources of draft power, namely, bullocks and tractors: ownership of bullocks by age-group, their value, their uses and rental rates, and lastly, renting frequency, rental rates and purpose of renting tractors are presented.

This document may have some inconsistencies in the data. Comments will be appreciated. Because of the preliminary nature of these results, tables should not be quoted without permission from MART/AZR.

Table 9. Qualities looked for in male breeding camels in highland Balochistan; camel survey, 1989.

	Location			All Areas
	Area I	Area II	Area III	
----- # farmers (%) -----				
Are male breeding camels run with female breeding camels?				
1) All year	3(9)	9(47)	18(69)	30(38)
2) Only in breeding months:	31(91)	10(53)	8(31)	49(62)
Total	34	19	26	79
Does the farmer select superior males to breed with females?				
1) Only superior males	33(92)	18(95)	28(88)	79(91)
2) No selection	3(8)	1(5)	4(12)	8(9)
Total	36	19	32	87
What qualities are most looked for in breeding males?				
1) Height, strength, color	35(85)	12(63)	13(42)	60(66)
2) Height, strength, good breed	-	1(5)	5(16)	6(7)
3) Strength, color, good breed	2(5)	-	-	2(2)
4) Height, strength, color and good breed	4(10)	6(32)	13(42)	23(25)
Total	41	19	31	91
Are young male camels castrated?				
1) Yes	-	2(5)	1(2)	3(3)
2) No	32(100)	38(95)	40(98)	110(97)
Total	32	40	41	113
At what age are young males castrated?				
Average	-	4	4	4
Std.Dev.	-	2	-	2
Range	-	1-5	4-4	1-5
# Farmers	-	2	1	3
If castration is not done, what are the reasons?				
1) A weaker draft animal	22(69)	35(92)	31(78)	90(82)
2) High death loss	7(22)	1(3)	1(3)	10(9)
3) Difficult operation-no vet. services available	3(9)	2(5)	6(15)	6(5)
4) Other	-	-	2(5)	4(4)

a) Farmer	42(100)	42(100)	51(98)	135(99)
b) Hired specialist	-	-	1(20)	1(1)
Total	42	42	52	136
How many days does it take to train a camel for?				
	# days			
1) Field work	16	4	6	10
2) Baggage hauling	111	106	82	99
How old are camels when they are first trained?				
	# years			
1) For field work	5	5	5	5
2) For baggage hauling (ave)	5	4.5	4.5	4.6

Table 20. Veterinary services available for camels in highland Balochistan; camel survey, 1989.

	Location			All Areas
	Area I	Area II	Area III	# Farmers (%)
When a camel gets sick, does the farmer:				
1) Use home remedies only	21(50)	19(45)	33(72)	73(56)
2) Always calls a veterinarian	3(7)	2(5)	1(2)	6(5)
3) Calls a vet. only after home remedies do not work	18(43)	21(50)	12(26)	51(39)
Total	42	42	46	130
If a farmer never calls a veterinarian, what are the reasons?				
1) Not available in the area	11(31)	21(78)	35(83)	67(64)
2) Too expensive	16(46)	6(22)	2(5)	24(23)
3) Poor results from veterinary service	8(23)	-	5(12)	13(13)
Total	35	27	42	104

Table 21. Working conditions of camels during fall and spring seasons in Highland Balochistan; camel survey, 1989.

	Location				All Areas
	Area I	Area II	Area III		
How many hours/day does the farmer work his camel at field preparation and planting time?					
Average	7	7	7	7	
Std. Dev.	2	2	2	2	
Range	4-10	3-9	4-12	3-12	
# Farmers	28	12	34	74	
In what condition are working camels in the fall (Sept-Oct) planting time?					
	# Farmers (%)				
1) Poor and weak	8(19)	3(7)	8(16)	19(14)	
2) Satisfactory	28(67)	24(59)	37(73)	89(66)	
3) Satisfactory but could be better with supplementary feed	6(14)	14(34)	6(12)	26(19)	
Total	42	41	51	134	
In what condition are working camels in the winter (Jan-Feb) Planting time?					
1) Poor and weak	24(57)	29(69)	36(70)	89(66)	
2) Satisfactory	11(26)	5(12)	7(14)	23(17)	
3) Satisfactory but could be better with supplementary feed	7(16)	8(19)	8(16)	23(17)	
Total	42	42	51	135	
Is the farmer satisfied with the traditional plough-planter?					
1) Yes	14(67)	3(7)	32(94)	49(51)	
2) Yes but improvements could be made	7(33)	39(93)	2(6)	48(49)	
Total	21	42	34	97	
Is the farmer satisfied with the present camel harness?					
1) Yes	20(95)	3(7)	32(94)	55(57)	
2) Yes but improvement could be made	1(5)	39(93)	2(6)	42(43)	
Total	21	42	34	97
