Mel Documentation

Add in the header of a function a comment

```php
/*
  Function: submitreportAction
  This function saves reports to tbl_reports table

  Parameters:
  report_id - report_id
  project_id - project_id.
  report_name - name of the report

  Returns:
  JSON record with 2 values
  > message: "report is created/modified/updated succesfully",
  > action: "add or update"
 */

public function submitreportAction()
{
    $_reportId = $this->getRequest()->getParam('report_id', 0);
    $_projectId = $this->getRequest()->getParam('project_id');
    $_report_name = $this->getRequest()->getParam('report_name', '');
    $_report_type = $this->getRequest()->getParam('report_type', '');
    $_start_date = $this->getRequest()->getParam('start_date', '');
    $_end_date = $this->getRequest()->getParam('end_date', '');
    $_ispublic = $this->getRequest()->getParam('is_public', 0);
    $_due_date = $this->getRequest()->getParam('due_date', '');
    $_remarks = $this->getRequest()->getParam('remarks', '');
    $_donor = $this->getRequest()->getParam('donor', array());
    $_donor = array_filter($_donor);
```

Add in the header of a function a comment

```php
/*
 Function: getallreportsAction
 This function send all resports by projects

 Parameters:
 project_id - the id of the project to get all reports.

 Returns:
 JSON report information json example
 > report_id: "427",
 > project_id: "202",
 > report_name: "Semi-Annual Technical Report",
 > report_type: "Technical Report - Progress",
 > file_exist: true is there is any file, false ... ",
 */

public function getallreportsAction()
{
    $_projectId = $this->getRequest()->getParam('project_id');
    $criteria = array('project_id' => $_projectId);
    $_projectreportCollection = $this->_reportData($criteria, 'report_name ASC');
    $_jsonArray = array();
    $_codes = array();
    foreach ($_projectreportCollection as $_projectreportEntity) {
        $_reportArray = $_projectreportEntity->toArray();
        if (!App_Function_Privileges::isInstitutionalAdmin()) {
            try {
                $_reportFileMapper = new Model_Mapper_ReportFile();
                $_reportFileMapper->fetchOne(array('donor_report_id' => $_projectreportEntity->report_id));
                $_reportArray['file_exist'] = true;
            } catch (Exception $e) {
```
